FP-60 CARD CANCELING DRILL

The **FP Model 60 Card Drill** can drill up to 2 1/2" at one time. New "Chuckless" system with the drill bit connected directly to motor shaft, eliminates vibration of drill bits for smoother operation. The FP-60 is shipped with one 1/4" drill bit. Optional drill bits may be added in sizes ranging from 1/8" to 3/8". As an added safety feature, the motor is only in operation when drill handle is lowered.

The FP Drill is equipped with an adjustable stop-gauge to allow drilling for customized or standard hole patterns. The drill can also be equipped with an optional pre-programmed bar so that drill stops are already set for standard drilling patterns. These include single hole, two hole, and three hole patterns. Operation is simple, fast, and accurate. Just press the table release to move the paper to the next stop. The **Model FP-60 (NT)** comes with both the standard stop-gauge and the preset gauge. These are mounted on a turret assembly for quick selection.

Right and left side guides slide on the ruler plate so its easy to position the paper.

Specifications:

Power: 115 V Table Size: 18.4" W X 12.8" D
Shipping Weight 90 lb.
